# assignment08_kafka_producer

February 21, 2022

```
[1]: import json
     import uuid

     from kafka import KafkaProducer, KafkaAdminClient
     from kafka.admin.new_topic import NewTopic
     from kafka.errors import TopicAlreadyExistsError
```

### 0.0.1 Configuration Parameters

**TODO:** Change the configuration prameters to the appropriate values for your setup.

```
[21]: config = dict(
          bootstrap_servers=['kafka.kafka.svc.cluster.local:9092'],
          first_name='Arindam',
          last_name='Samanta'
      )

      config['client_id'] = '{}{}'.format(
          config['last_name'],
          config['first_name']
      )
      config['topic_prefix'] = '{}{}'.format(
          config['last_name'],
          config['first_name']
      )

      config
```

```
[21]: {'bootstrap_servers': ['kafka.kafka.svc.cluster.local:9092'],
       'first_name': 'Arindam',
       'last_name': 'Samanta',
       'client_id': 'SamantaArindam',
       'topic_prefix': 'SamantaArindam'}
```

### 0.0.2 Create Topic Utility Function

The `create_kafka_topic` helps create a Kafka topic based on your configuration settings. For instance, if your first name is *John* and your last name is *Doe*, `create_kafka_topic('locations')`

will create a topic with the name `DoeJohn-locations`. The function will not create the topic if it already exists.

```python
[3]: def create_kafka_topic(topic_name, config=config, num_partitions=1,␣
     ↪replication_factor=1):
         bootstrap_servers = config['bootstrap_servers']
         client_id = config['client_id']
         topic_prefix = config['topic_prefix']
         name = '{}-{}'.format(topic_prefix, topic_name)

         admin_client = KafkaAdminClient(
             bootstrap_servers=bootstrap_servers,
             client_id=client_id
         )

         topic = NewTopic(
             name=name,
             num_partitions=num_partitions,
             replication_factor=replication_factor
         )

         topic_list = [topic]
         try:
             admin_client.create_topics(new_topics=topic_list)
             print('Created topic "{}"'.format(name))
         except TopicAlreadyExistsError as e:
             print('Topic "{}" already exists'.format(name))

     create_kafka_topic('locations')
```

```
Topic "SamantaArindam-locations" already exists
```

### 0.0.3 Kafka Producer

The following code creates a `KafkaProducer` object which you can use to send Python objects that are serialized as JSON.

**Note:** This producer serializes Python objects as JSON. This means that object must be JSON serializable. As an example, Python `DateTime` values are not JSON serializable and must be converted to a string (e.g. ISO 8601) or a numeric value (e.g. a Unix timestamp) before being sent.

```python
[4]: producer = KafkaProducer(
         bootstrap_servers=config['bootstrap_servers'],
         value_serializer=lambda x: json.dumps(x).encode('utf-8')
     )
```

### 0.0.4 Send Data Function

The `send_data` function sends a Python object to a Kafka topic. This function adds the `topic_prefix` to the topic so `send_data('locations', data)` sends a JSON serialized message to `DoeJohn-locations`. The function also registers callbacks to let you know if the message has been sent or if an error has occured.

```python
[5]: def on_send_success(record_metadata):
         print('Message sent:\n    Topic: "{}"\n    Partition: {}\n    Offset: {}'.
     →format(
             record_metadata.topic,
             record_metadata.partition,
             record_metadata.offset
         ))

     def on_send_error(excp):
         print('I am an errback', exc_info=excp)
         # handle exception

     def send_data(topic, data, config=config, producer=producer, msg_key=None):
         topic_prefix = config['topic_prefix']
         topic_name = '{}-{}'.format(topic_prefix, topic)

         if msg_key is not None:
             key = msg_key
         else:
             key = uuid.uuid4().hex

         producer.send(
             topic_name,
             value=data,
             key=key.encode('utf-8')
         ).add_callback(on_send_success).add_errback(on_send_error)
```

```python
[6]: """
     example_data = dict(
         key1='value1',
         key2='value2'
     )

     send_data('locations', example_data)
     """
```

```python
[6]: "\nexample_data = dict(\n    key1='value1',\n
     key2='value2'\n)\n\nsend_data('locations', example_data)\n"
```

```python
[7]: import os
     import json
```

```python
